

ABSTRACT

A database system for reminiscences, having a question text format storage mechanism 1 which has stored question text formats which are question texts which stimulate/ prompt a user's reminiscence and contain a variable component having attributes and a telecommunications mechanism 2 which outputs question texts to users and obtains replies to question texts from the previously mentioned users, a response storage mechanism 3 which creates and stores a data base of replies to the previously mentioned question texts together with attributes of the previously mentioned replies, a question text generating mechanism 4 which reads question text formats from the previously mentioned question text format storage mechanism, reads responses which match variable component and attributes of this question text format from the previously mentioned response storage mechanism 3, fill these read responses in variable components which match attributes of question text formats, generating question texts and outputting to the previously mentioned telecommunications mechanism 2 and a response outputting mechanism 5 which converts responses made into data bases by a response storage mechanism into a specified format and outputs them.
